

Surviving a HIPAA Security Audit

The Health Insurance Portability and Accountability Act (HIPAA) was enacted by US Congress in 1996, designed to safeguard Protected Health Information that exists in an electronic form, otherwise known as ePHI.

Personal health information is **50x** more valuable on the black market than financial information, and stolen patient health records can fetch as much as **\$60 per record.**

Failure to protect personal health information and comply with HIPAA can result in **civil and criminal penalties.**

90% of all entities reviewed in the first round of HIPAA audits fell short of compliance.

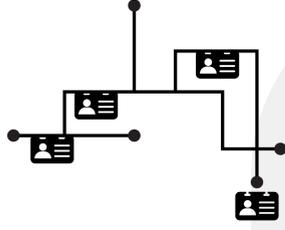

10 Common HIPAA Violations

- ▲ Unencrypted Patient Data
- ▲ Employee Error
- ▲ Lost or Stolen Devices
- ▲ Use of third party without a business associate agreement (BAA)
- ▲ Failure to notify HHS of data breach within 10 days
- ▲ Employees illegally accessing patient files
- ▲ Access to patient records without authorization
- ▲ Accessing patient information on unsecured devices
- ▲ Lack of HIPAA awareness training
- ▲ Failure to promptly release information to patients

Herjavec Group's expertise and leadership in comprehensive security services can help you achieve HIPAA compliance without sacrificing your business objectives.

Engage

We conduct an initial **Privacy Impact Assessment** looking at how personal health data flows throughout your organization.

1

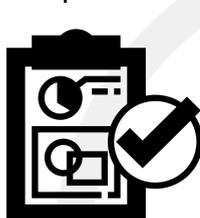

Research

We meet with your organization's stakeholders to identify how your organization protects personal and/or personal health information as it is collected, used, disclosed, stored and ultimately destroyed.

2

Report

After the initial assessment and discovery phase, we deliver a detailed report including the risks identified and a roadmap to achieve compliance.

3

Action

We work with you to develop a step-by-step action plan. We provide supporting documentation to ensure you can demonstrate your efforts if an audit occurs.
